

1) Open Elastic Benstalk

2) Add Details

The screenshot shows the 'Name, review, and create' step in the AWS IAM console. The 'Role details' section has a 'Role name' field with the value 'nishal' and a 'Description' field with the text 'Allows EC2 instances to call AWS services on your behalf.' Below this is the 'Step 1: Select trusted entities' section, which displays a 'Trust policy' in JSON format:

```
1 {
2   "Version": "2012-10-17",
3   "Statement": [
4     {
5       "Effect": "Allow",
6       "Action": [
7         "sts:AssumeRole"
8       ],
9       "Principal": {
10        "Service": [
11          "ec2.amazonaws.com"
12        ]
13      }
14    ]
15  }
```

The screenshot shows the 'Roles' page in the AWS IAM console. A green banner at the top indicates 'Role nishal created.' The 'Roles (3)' table lists the following roles:

Role name	Trusted entities	Last activity
AWSServiceRoleForSupport	AWS Service: support(Service-Linker)	-
AWSServiceRoleForTrustedAdvisor	AWS Service: trustedadvisor(Service)	-
nishal	AWS Service: ec2	-

Below the table, the 'Roles Anywhere' section provides information on authenticating non-AWS workloads, including links to 'Access AWS from your non AWS workloads', 'X.509 Standard', and 'Temporary credentials'.

3) Comeback to the Elastic Beanstalk

The screenshot shows the search results for 'elasticbe' in the AWS IAM console. The 'Services' section lists the following services:

- [Elastic Beanstalk](#) ☆
- [Elastic Transcoder](#) ☆
- [Elastic Container Service](#) ☆
- [Elastic Container Registry](#) ☆

The 'Features' section lists the following features:

- [Applications](#)
- [Elastic Beanstalk feature](#)
- [Environments](#)
- [Elastic Beanstalk feature](#)
- [Elastic IPs](#)
- [EC2 feature](#)

The screenshot shows the Amazon Elastic Beanstalk console home page. The header includes the AWS logo, a search bar, and the text "eu-north-1.console.aws.amazon.com/elasticbeanstalk/home?region=eu-north-1#/welcome". The main content area has a dark blue background with the heading "Amazon Elastic Beanstalk End-to-end web application management." Below this, a "Get started" section explains that the service is easy to use and handles deployment, scaling, and updates. A "Create application" button is visible. To the right, a "Pricing" section states there is no additional charge for Elastic Beanstalk, and a "Getting started" link is provided. The bottom section, "Benefits and features", lists "Easy to get started" and "Complete resource control".

The screenshot shows the "Configure environment" step in the Amazon Elastic Beanstalk console. The left sidebar lists the steps: Step 1 (Configure environment), Step 2 (Configure service access), Step 3 - optional (Set up networking, database, and tags), Step 4 - optional (Configure instance traffic and scaling), Step 5 - optional (Configure updates, monitoring, and logging), and Step 6 (Review). The main content area is titled "Configure environment" and includes an "Info" icon. It contains three sections: "Environment tier" with radio buttons for "Web server environment" (selected) and "Worker environment"; "Application information" with a text input for "Application name" (containing "WebApp") and a link for "Application tags (optional)"; and "Environment information" with a text input for "Environment name" (containing "WebApp-env") and a "Domain" section with a text input (containing "Leave blank for autogenerated value") and a "Check availability" button.
